DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group I, claims 1-19, 20-51 in the reply filed on 1-20-06 is acknowledged. The traversal is on the ground(s) that Group II claims are similar to Group I claims. This is not found persuasive because Group I claims require a substrate having a mean roughness of 30-4000 A and Group II, claim 52 does not require a substrate having a mean roughness of the substrate.

The requirement is still deemed proper and is therefore made FINAL.

- 2. Since the elected species was not found, a negative electrode comprising a substrate comprising a polymer film deposited with metal having a mean roughness of 30-4000 A and a lithium layer coated on the substrate has been found allowable. The next species searched was a substrate comprising a metal having a mean roughness of 30-4000 A and a lithium layer coated on the substrate. Therefore claims 1-8, 10, 14-21, 23-31, 33, 37-41, 45, 47 have been examined.
- 3. Claims 9, 11-13, 22, 32, 34-36, 42-44, 46, 48-62 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention and species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 1-20-06.

Application/Control Number: 10/603,777

Art Unit: 1745

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-3, 6-8, 14-16, 19-21, 23-26, 29-31, 41, are rejected under 35 U.S.C. 102(b) as being anticipated by Tanaka (5,462,820).

Tanaka teaches in column 2, lines 29-37, a nonaqueous battery comprising a negative electrode, a positive electrode, a separator, an electrolyte, etc. Tanaka teaches in column 6, that the electrode sheet is pressed and the support is treated to make the surface thereof uneven to improve the adhesion of the electrode material. The surface of the support can be roughened by anodization, etc. and the surface-roughness of the support is on the order of 0.1-10um [1000-100,000 A]. The negative electrode comprises lithium. Tanaka teaches in column 16, Example 1, a battery comprising a positive electrode current collector comprises aluminum foil and the active material is LiCoO2; that the negative electrode current collector comprises copper foil and a microporous separator of polypropylene. Tanaka teaches in column 18, claim 2, that the negative electrode active material comprises elemental lithium or alloys, Li-Al alloys, etc.

Art Unit: 1745

Allowable Subject Matter

6. Claims 4-5, 10, 17-18, 27-28, 33, 37-40, 45, 47 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Laura S. Weiner whose telephone number is 571-272-1294. The examiner can normally be reached on M-F (6:30-4:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
